PROFESSIONAL EXPERIENCE

Feb 2016 to Present (2 years)	**Software Engineer** at **Applied Science Int** Giza, Egypt. Industry: Engineering Services, Computer Software, Consulting Services Company Size: 101-500 employees

Achievements: >> Took the responsibility of revamping the steelnetwork.com website theme. Transforming it from old non-responsive theme, to modern, fully-responsive theme using HTML and CSS best practices that keeps SEO and browser compatibility in mind. Also fixing rendering bugs and JavaScript errors.

>> Contributed in all development stages of implementing the e-commerce module of the TSN Portal.

>> Contributed in revamping and refactoring the whole TSN Portal project from legacy, non-maintainable codebase, to a newer one that is maintainable and conforms to OOD principles and software engineering best practices, in addition to upgrading all of its frameworks and libraries.

>> Contributed in all stages of re-designing the TSN Portal's database to adhere to database design principles. This included design, implementation and data migration stages.

>> Helped in maintaining the projects TSN portal, ASI portal, company's timing & accountability and company's internal services..

Job Responsibilities and Details: Roles:

>> Developing and maintaining all the company's internal IT systems, such as its Accountability/ Timing system, Task Manager system, ERP system and Employees Portal.

>> Developing and maintaining the company's website, including their Online Business Brochures and Products Portals.

>> Developing and maintaining the steelnetwork.com web app, for our sister company, TSN which manufactures and distributes steel structure along the US and Canada.

The website features online catalog for all its steel products, Business Intelligence and reporting tools for the company's clients and an e-commerce portal for purchasing products, including inventory management and fully automated shipping management. All of which is configured and managed through an Admin area.
